FOURNIER, A FAMILY BUSINESS!

Since founding the business in 1938, L. Fournier & Fils is operated by the 3rd generation. The family business expertizes are carried out on numerous large-scale projects in a variety of areas of Quebec, Nunavik, Ontario and Nunavut with a skilled workforce among the most experienced.

Committed to environmental excellence in its operations and services, L. Fournier & Fils is dedicated to health and safety of its employees and of others, and in protecting the environment.

PARTNERSHIP WITH MEEYOUBOU INC.

L. Fournier & Fils has been working with Aboriginal partners since 2012, starting with a family of the Mistissini Cree Nation. The combination of their extensive knowledge of the land and of L. Fournier & Fils expertise resulted in the accomplishment of great work at the Stornoway Diamond Mine in Northern Quebec.

The business has developed six partnerships in order to meet increased demand, especially from the mining market. Respectful driven dialogue to reach agreements and establish lasting business relationship is KEY for Fournier. With qualified people and excellent business practices, L. Fournier & Fils develops first-rate partnerships with communities that fulfill mutual needs in carrying out work in a wide range of services :

- **Concrete Work**
- **Crushing and Screening**
- **Mass excavation**
- **Mining & Civil Engineering**
- **Transportation**

A good understanding of the client's needs is at the heart of the personalised approach in place in all the projects undertaken. Work is achieved by the partnership teams in a work spirit where respect, environment, health and safety are the priority. Training, integration and hiring of Aboriginal workers is the combination that leads to great achievements.

The Partnership between Meeyoubou inc. and Fournier & fils is the combination of **extensive knowledge** of the VC-29 land and of **Cree culture** with more than **80 years** of family expertise in the **construction** and **mining** sector.

Implemented in 2019 with the Mayappo Family from the Cree Nation of Wemindji in order to **achieve tangible work** in the area of the 52nd parallel on the Eeyou Istchee Baie James territory.

The teams of Fournier & Fils are composed of operators, site superintendents, foremen, engineers, purchasers, trainers and many more employees who have worked with Crees from Ontario and Eeyou Itchee, Quebec Anishabee and Inuit from Nunavut in the past 6 years. This **intercultural** experience at camp sites and on different projects is very valuable when the focus is on **delivering projects on time and on budget** for clients.

The **collaboration** and **mutual commitment** between team members are great advantages for **Meeyoubou - Fournier** with an effect on staff retention.

MASS EXCAVATION

Over 55 years of experience in handling and hauling of overburden material, granular material, rock (waste and ore) and tailings.

A specialized team offers turnkey services that include all aspects of open-pit mine operation of any-size, from start-up to decommissioning. Meeyoubou-Fournier works closely with clients on such projects. When undertaking projects, whether it is building and maintaining dams, topsoil removal for open-pit mines, mining operations, or preparatory excavation for mining buildings, L. Fournier & Fils owns a large fleet of equipment for projects of any scale and the multidisciplinary teams are renowned for its efficiency and commitment to quality.

COMMERCIAL CONCRETE

Concrete plants : concrete batch plant operation (portable and stationary) and backfill plant (paste or rock fill)

Ready-mix concrete : production, delivery and concrete pumping including cement, pre-mixed concrete, sprayed concrete and packaged cement mixes

Premixed bagged concrete : high-performance concretes feature excellent placement and finishing quality

Precast concrete structures : concrete blocks, concrete slabs, concrete anchors, retaining walls, concrete walls, parking bumpers

The technical support and after-sales service stands out and the R & D lab develops new products to meet specific needs.

SHOTCRETE

- High pressure injection of concrete products
- Waterproofing and cementation of diamond drill casing and holes
- Drill casing decommissioning
- Shotcrete placement
- Underground concrete and cement related works
- Grout injection & cement product injection
- Cemented rock fill

Swatcrete division specializes in cement injection, applying and anchoring wet and dry shotcrete, and employing cemented rock fill for both surface and underground projects.

SWAT CRETE

CRUSHING AND SCREENING (PORTABLE AND STATIONARY)

Natural and crushed stone
L. Fournier & Fils owns a number of quarries, gravel pits, and sand pits in the Abitibi-Témiscamingue region. Product line includes : industry standard crushed stone: MG-20 (0–3/4”), MG-56 (0–2 1/2”) MG-112 (0–4”), washed stone for concrete, asphalt, drainage, sand (sieved, septic drain field, concrete, filtration, mortar, abrasives), topsoil, ballast and riprap (embankment armour rocks)

Goliath 1500 M Crusher
The largest mobile crusher on wheels in North America. With a capacity of 1500 tonnes per hour, it can process rocks up to 1500 mm in diameter.

In addition to reducing your costs and work duration, the Goliath is environmentally friendly because it processes more tonnage with less energy, reducing greenhouse gas emissions. It was designed to work year-round in all climates.

Conventional mobile crushers
Of different capacities, on wheels or tracks, mobile crushers you require are available with a state-of-the-art crushing team that has an excellent reputation in the industry.

Screening plant
Various sizes of mobile screening plants on tracks are available to meet our clients operating needs. These plants are used to produce sand for concrete and for subbase layers and septic drain fields, material for asphalt production, and large-diameter rock fill. Experienced production and technical teams can adapt the finished product to your specific needs.

MINING AND CIVIL

Mine-operation services
Support for everyday operations: road resurfacing, dam heightening, ore transport, support for surface operations, open-pit mine operation, snow removal and site maintenance

Project Start-up
If you need assistance in starting your mining project, Meeyoubou-Fournier can count on seasoned team and cutting-edge equipment that has earned an outstanding reputation over the past 45 years, for both open-pit and underground mines : top-soil removal, excavation and land preparation for buildings, water supply, dams, bridges, access and winter road construction, culverts, sewer facilities, piping, landscaping and ditches

TRANSPORTATION

Our fleet was designed to transport both on site and on road from and to site. Qualified staff handle everyday operations safely and productively to transport : sand and gravel, bulk material, including transportation of ore, cement and raw materials with lowboy trailers and flatbed trailers.

Also, a year-round maintenance of roads and pathways, including snow removal leading to an operating site is offered.

Transportation of bulk goods on isolated road conditions, including northern environments and winter roads (such as the Trans-Taiga Road) is one of the services offered.

Our large fleet of trucks ensures fast, efficient delivery of our products 24/7.

REHABILITATION OF CONSTRUCTION AND MINING SITES / RESTORATION OF MINING SITES

Site decommissioning
When starting to carry out site rehabilitation work, the extensive experience in mine-site rehabilitation is not only an asset, it is inescapable! Meeyoubou-Fournier adhere to all environmental standards and has close relationships with governmental environmental and sustainable development bodies.

Rehabilitation work
- Rehabilitation and decontamination
- Pond decommissioning
- Revegetation
- Restoration of orphan sites
- Drainage and levelling

CONSTRUCTION AND HEAVY EQUIPMENT RENTAL WITH TRAINED PERSONNEL TO OPERATE IT SAFELY

Dedicated to the efficient delivery of high-quality products and services that meet clients' specific and changing needs through an experience based on mutual respect and success.

L. Fournier & Fils owns a large fleet of equipment for projects of any scale, and the multidisciplinary team is renowned for its efficiency and commitment to quality. All our work meets the strictest environmental, health, and work safety standards.

Need workers? The specialized workforce hiring and training department can help.

DECONTAMINATION OF SOILS

ATLAS tse – a division of L. Fournier & Fils
Focused on soil remediation techniques, improvement of environmental performance and reduction of decontamination costs, services include :

- soil treatment : Recycle 98 % of decontaminated soil as fill material in civil engineering works, landscaping and even in various agricultural applications
- environmental site assessment : Help stakeholders taking the right decisions concerning soil management
- ground analysis : Complete analysis and monitoring of groundwater quality carried out by qualified hydrogeologists
- in-Situ treatment : Soil and groundwater decontamination without any movement of material to be processed with a chemical oxidation technique.

VALORIZATION OF ABANDONED MINING STERILE / SUSTAINABLE DEVELOPMENT STRATEGY

The sustainable development strategy of L. Fournier & Fils is at the heart of the operations undertaken in 2014 regarding the valorization and second transformation of 20 million tons of abandoned mining sterile of the Sigma mine, located near the urban area of the town of Val-d'Or.

Efforts and work on the site already improved significantly the imprint on the ecology of a vast area and the industrial landscape. Continuation of the project will transform a significant environmental liability into a structured green legacy for the next generations. This commitment to environmental excellence is also shared by Meeyoubou inc.

Meeyoubou-Fournier… committed to environmental excellence!
